	Neopres 9010	Phenoxyethanol, Ethylhexylglycerin	GOVA	0.80
	Sandalwood Fragrance	Parfum	Vanessence	0.20

Procedure:

Phase	Temperature	Procedures
A	RT	Add phase A to a beaker and position under an overhead mixer.
B	40°C	In a separate beaker heat phase B at 40°C until all the solids are melted and thoroughly mixed.
AB	40°C	Slowly add phase B to phase A while stirring with an overhead mixer, allowing the gel to recover between additions.
ABC	40°C	Add phase C and mix well.
